EMAIL SIGNATURE SETUP GUIDE

Mozilla Thunderbird

Add your KARSTATION account to Thunderbird and install your official email signature, step by step.

What you need

- Mozilla Thunderbird installed on your computer
- Your KARSTATION email address and password
- The KARSTATION Email Signature Generator (open it in your browser)

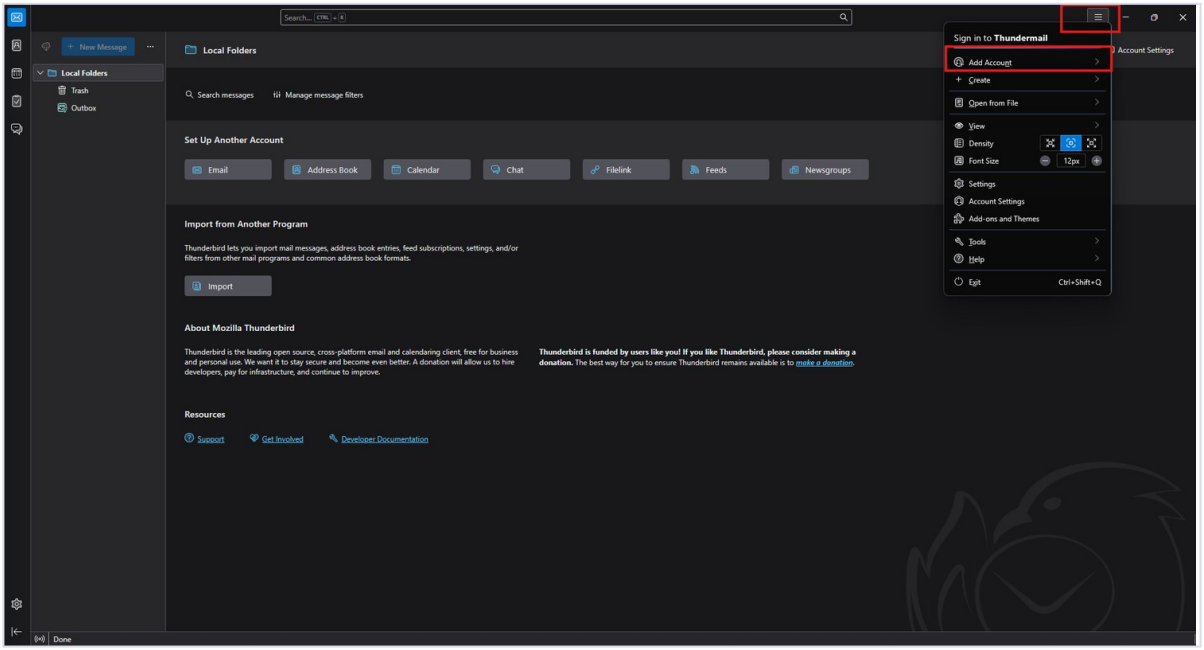

PART 1 OF 2

Add your email account

Already have your KARSTATION account in Thunderbird? Skip ahead to Part 2.

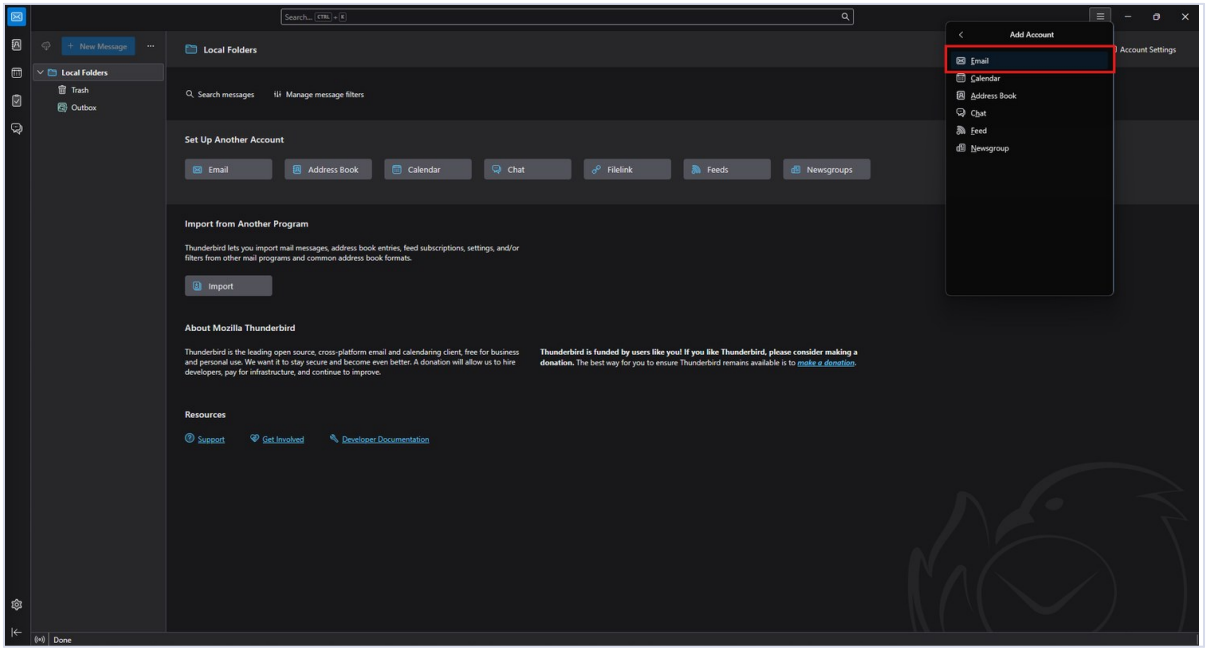

1 Open the menu

Click the three-line menu icon at the top right of Thunderbird, then choose **Add Account**.

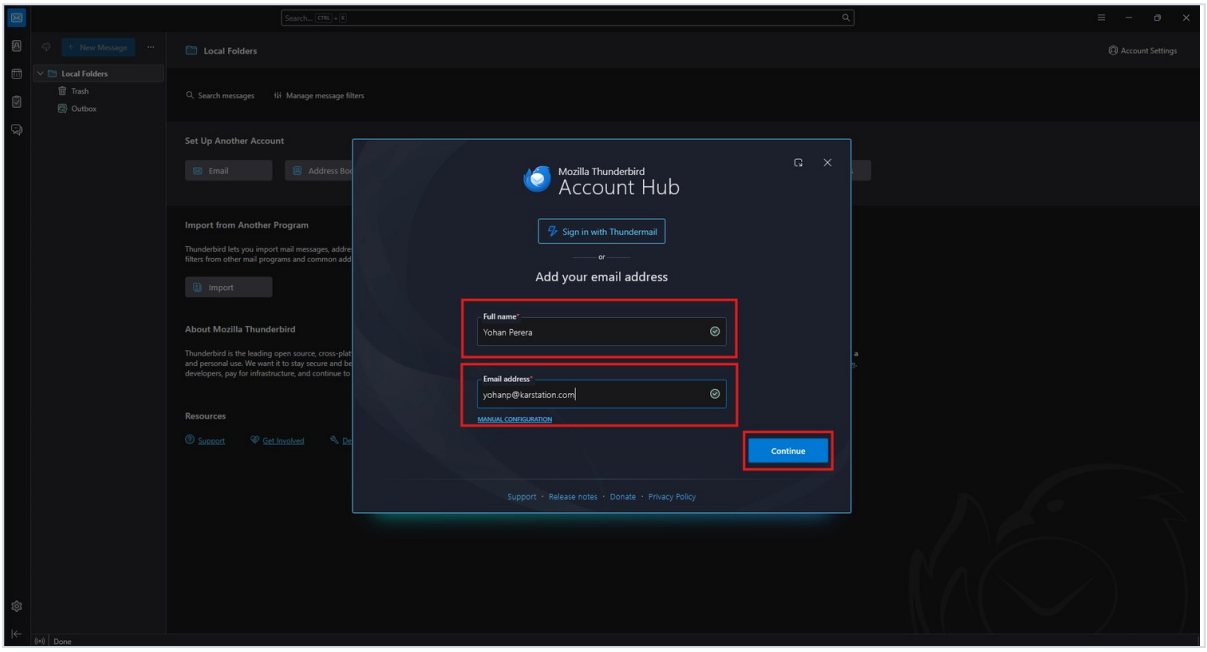

2 Choose Email

From the Add Account list, click **Email**.

3 Enter your details

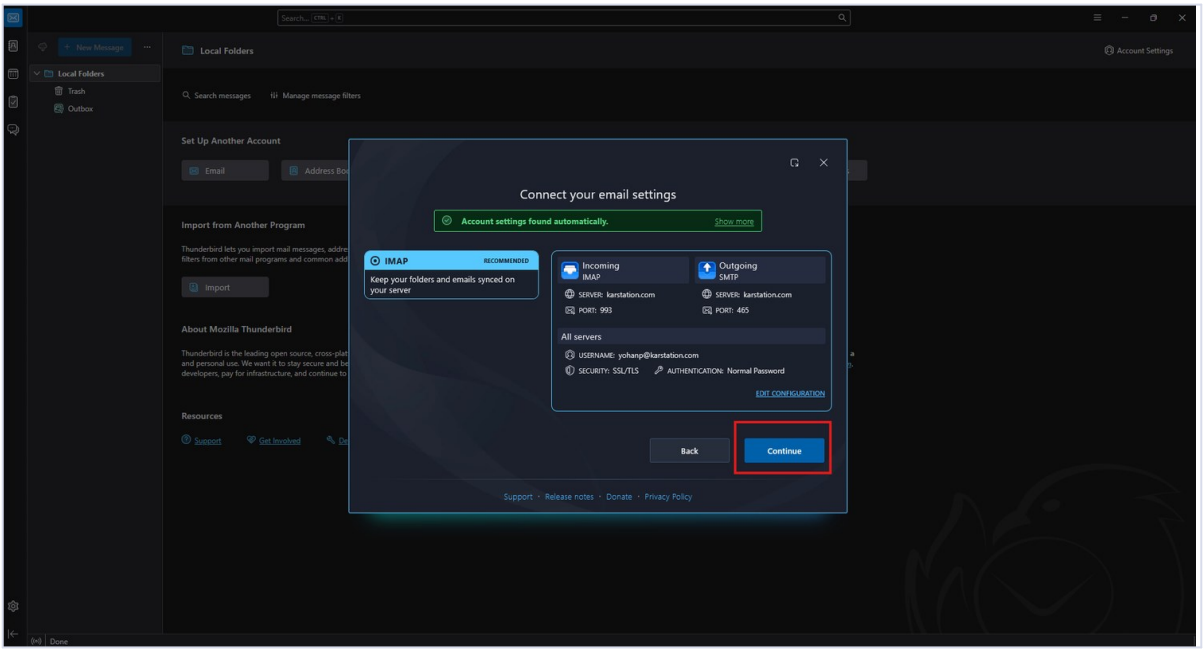

Type your **Full name** and your KARSTATION **Email address**, then click **Continue**.

4 Confirm the settings

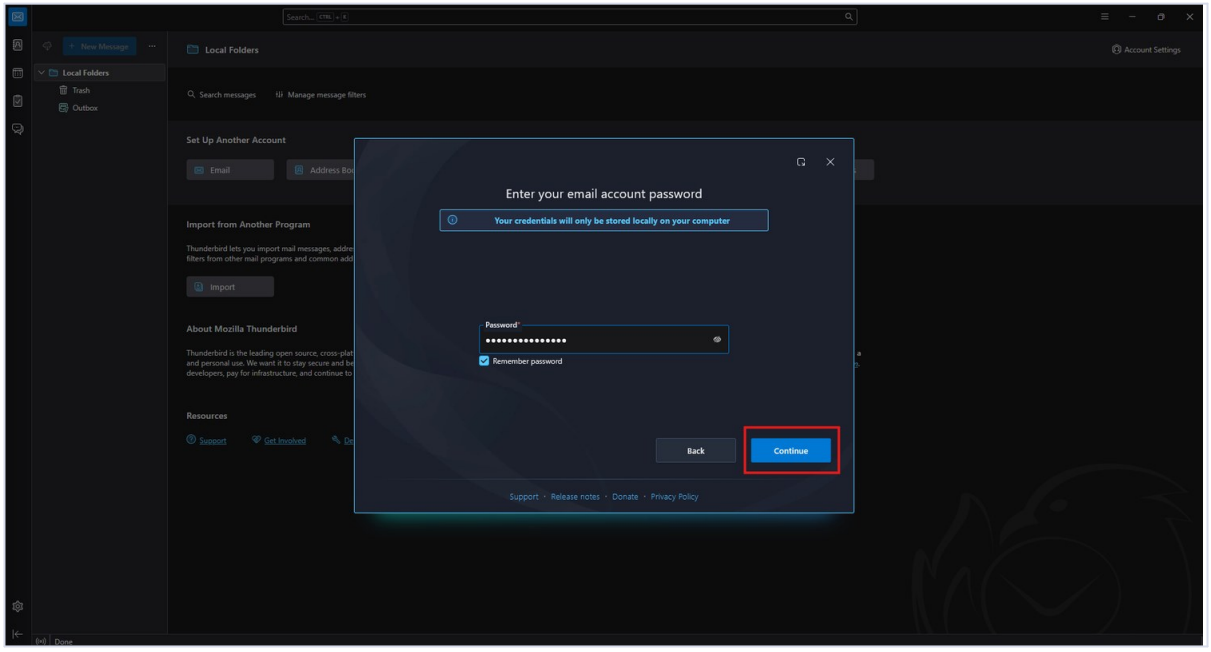

Thunderbird finds the account settings automatically. Check that they match, then click **Continue**.

> **Settings: Incoming:** IMAP, server karstation.com, port 993. **Outgoing:** SMTP, server karstation.com, port 465. Username is your full email address, security SSL/TLS, authentication Normal Password.

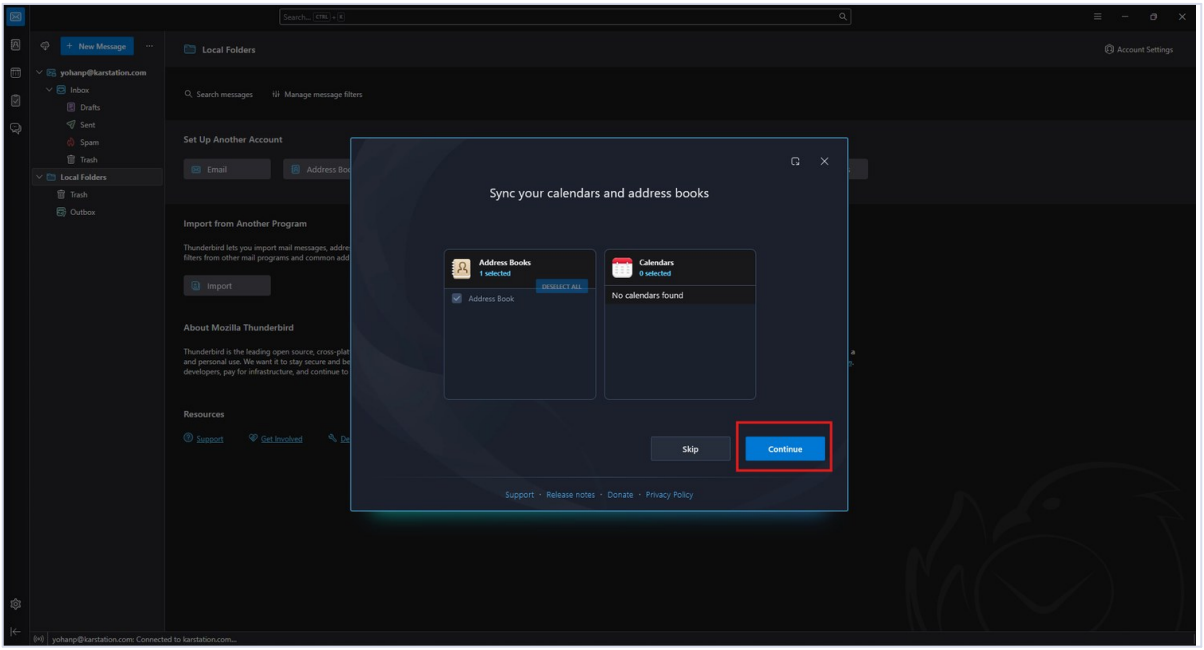

5 Enter your password

Type your email account password. Leave **Remember password** ticked if you do not want to type it every time, then click **Continue**.

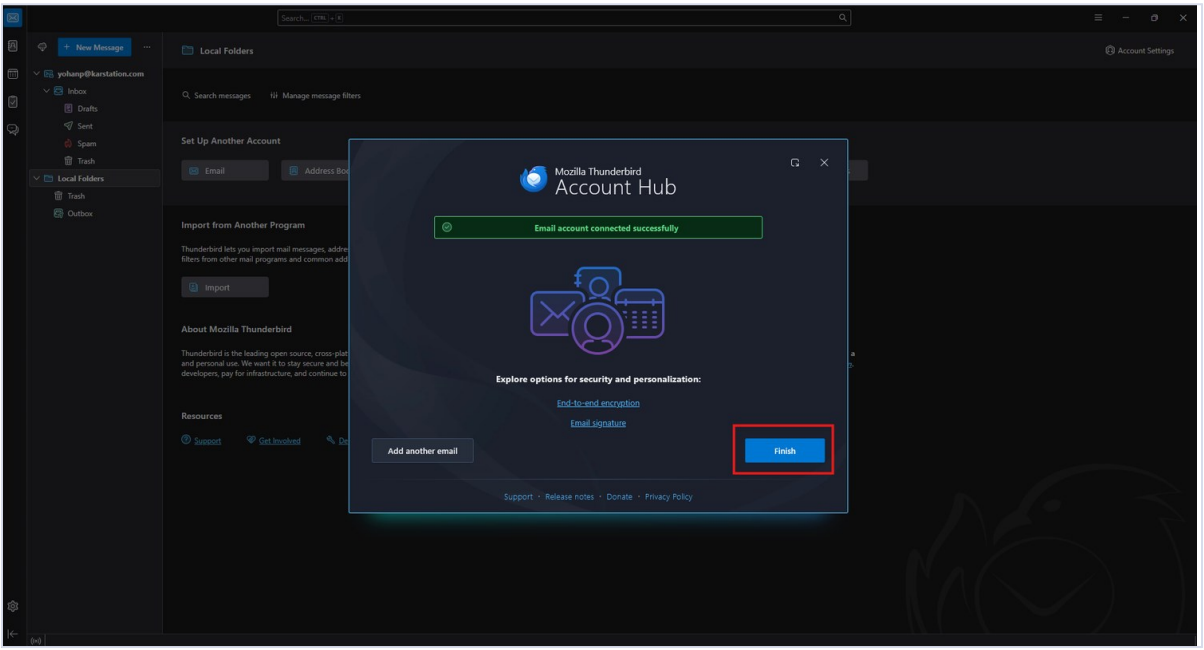

6 Sync address books

On the sync screen, click **Continue** (or **Skip** if you do not need your address book).

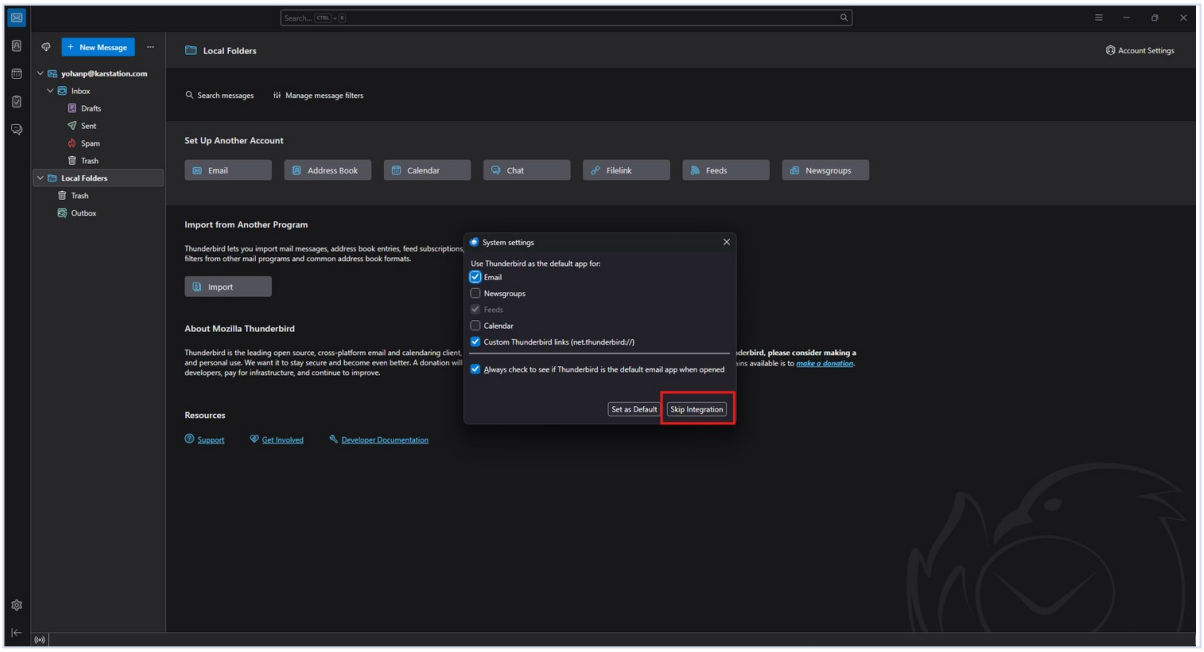

7 Account connected

When you see **Email account connected successfully**, click **Finish**.

8 Default email app

Thunderbird may ask whether to use it as your default email app. Click **Set as Default** to do so, or **Skip Integration** to leave your current default unchanged.

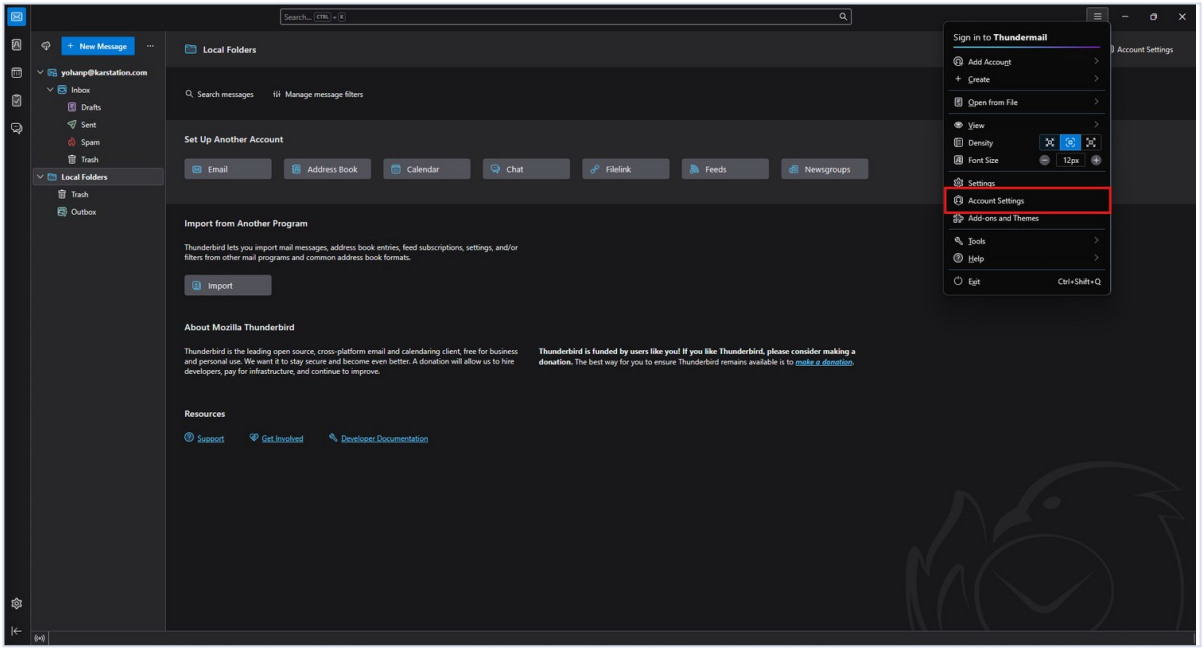

PART 2 OF 2

Install your email signature

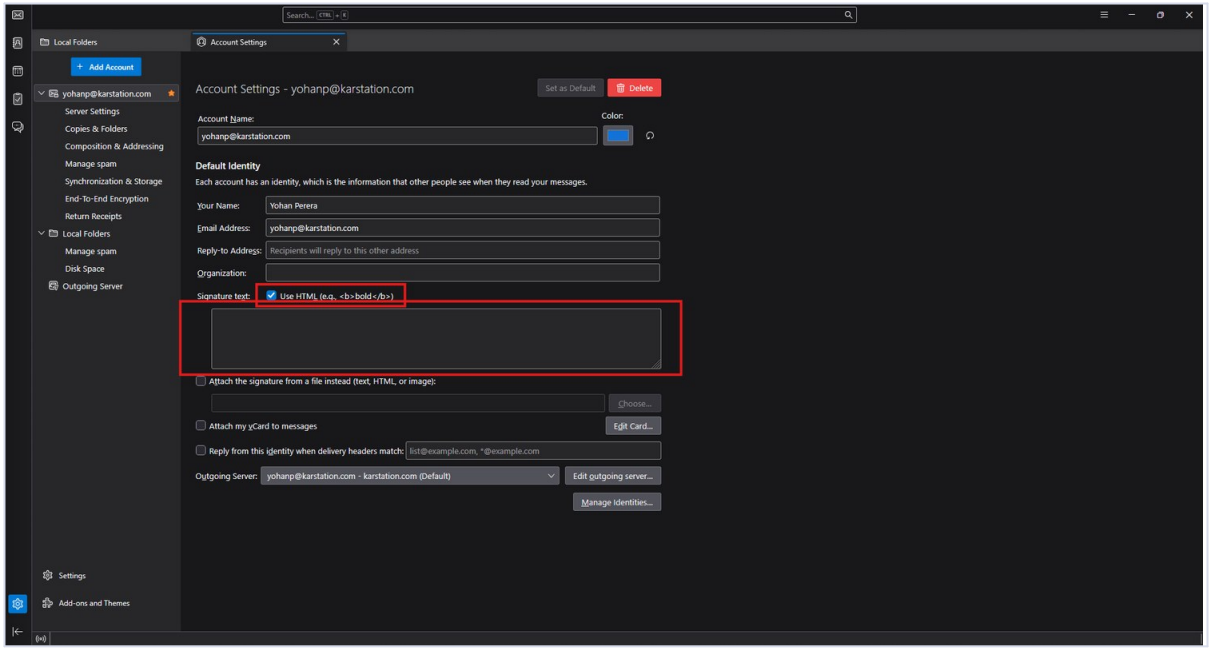

1 Open Account Settings

Click the three-line menu icon at the top right and choose **Account Settings**.

2 Turn on HTML signatures

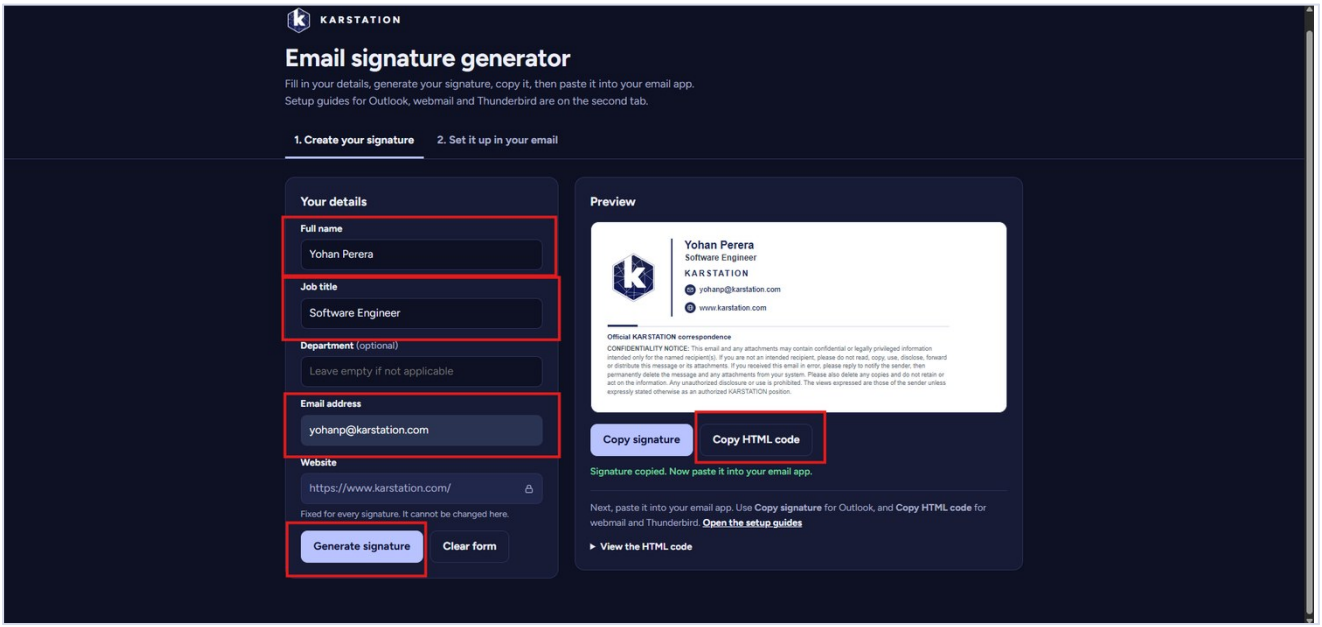

Select your KARSTATION account in the left-hand list. Next to **Signature text**, tick **Use HTML**. The signature box below it is where the code will go.

3 Generate and copy the HTML code

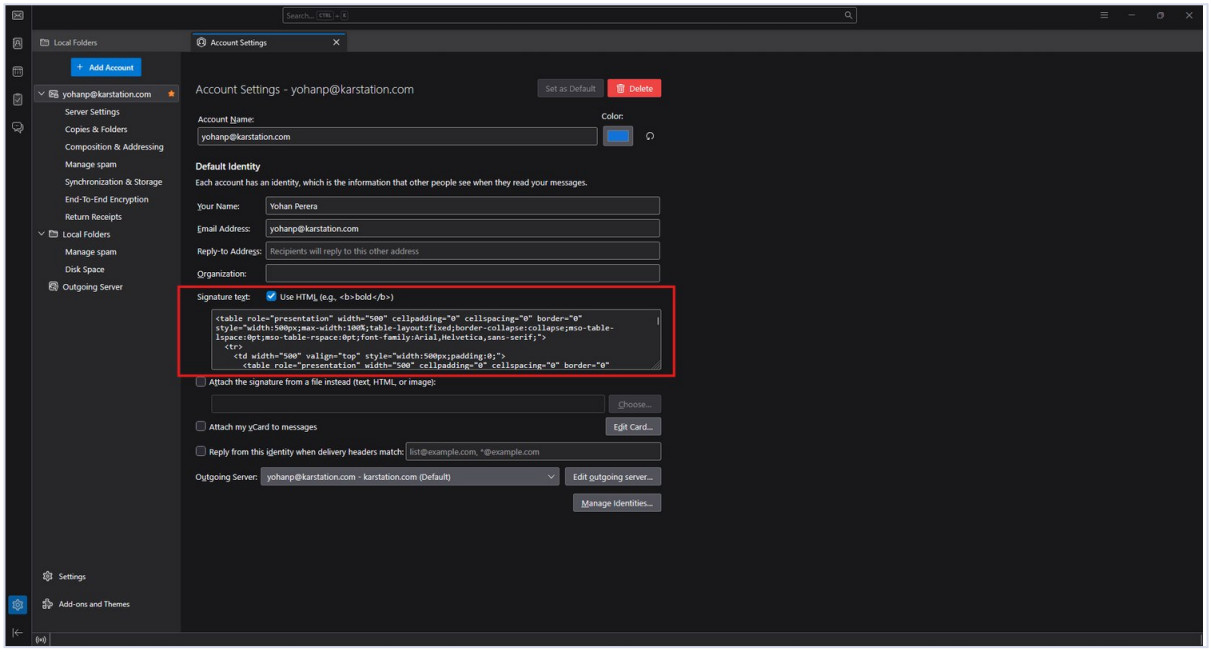

Open the KARSTATION Email Signature Generator. Enter your **Full name** and **Job title** (add a **Department** if it applies) and check your **Email address**. Click **Generate signature**, then click **Copy HTML code**.

> **Important:** Thunderbird needs the HTML code, not the plain **Copy signature** button.

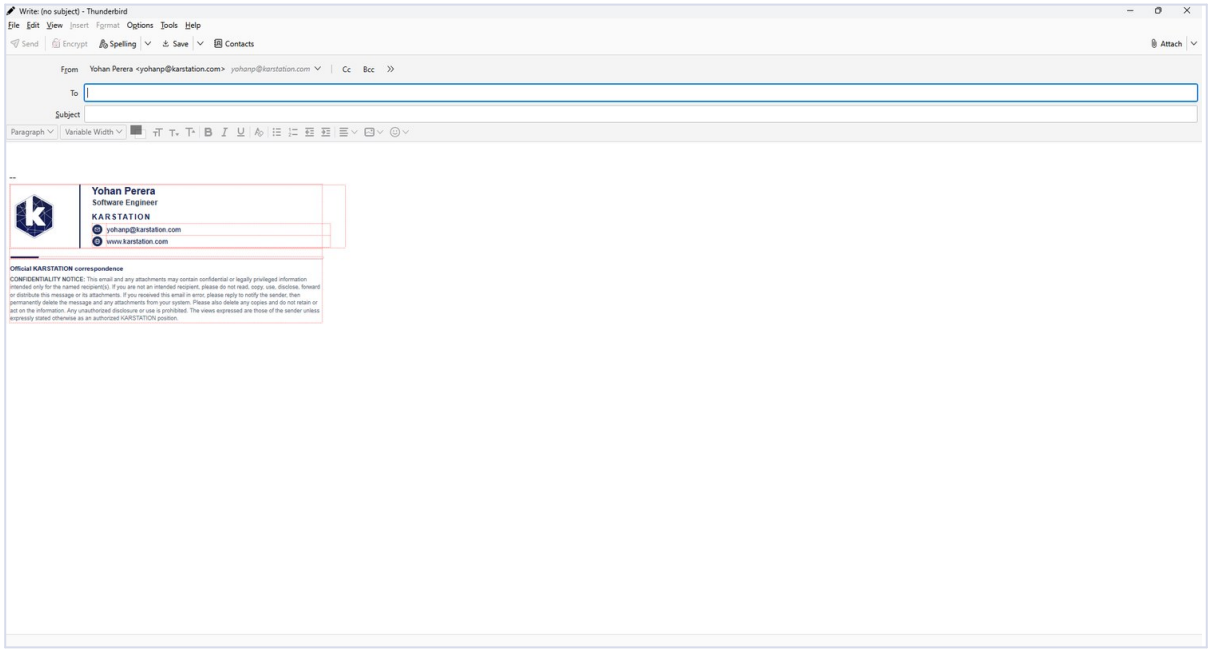

4 Paste the code into Thunderbird

Click inside the **Signature text** box and press **Ctrl + V** to paste the code. Thunderbird saves the change automatically.

5 Check the result

Write a new message. Your signature appears at the bottom of the message, below the dashed line. Check that your name, job title, email address and website are correct.

Troubleshooting: If you see raw code instead of a formatted signature, go back to Account Settings and make sure **Use HTML** is ticked, then paste the HTML code again.
