EMAIL SIGNATURE SETUP GUIDE

Webmail (Roundcube)

Install your official KARSTATION email signature when you read and send email in your web browser.

What you need

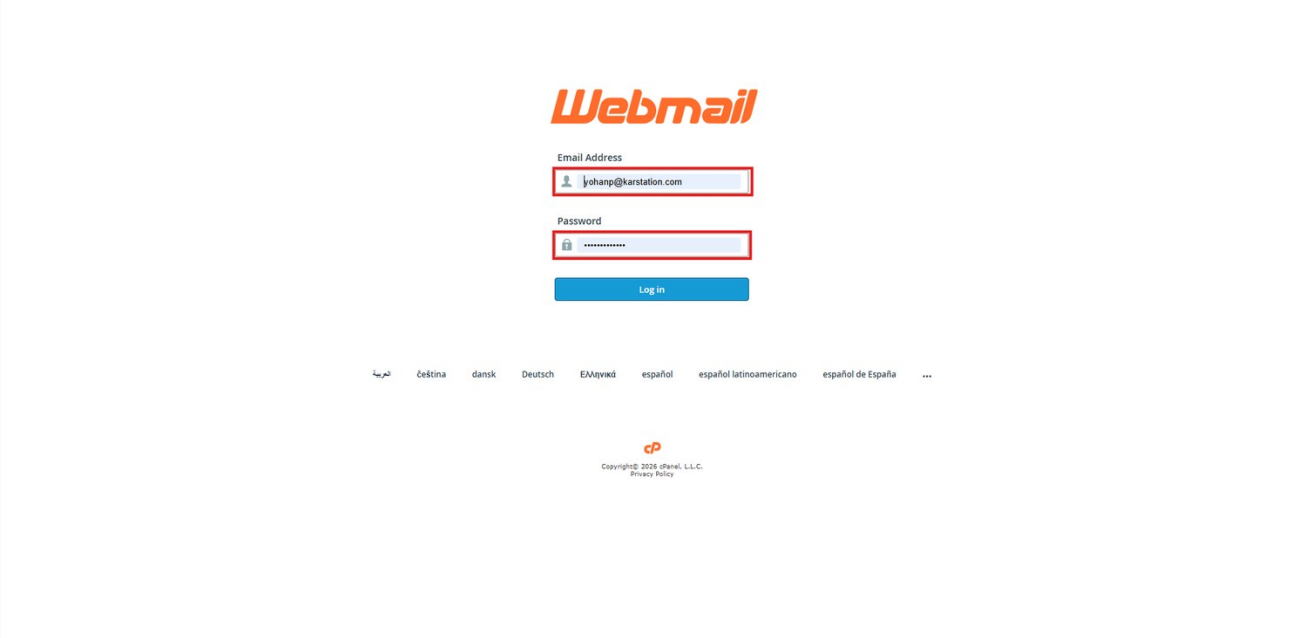

- A web browser and your KARSTATION webmail login page
- Your KARSTATION email address and password
- The KARSTATION Email Signature Generator (open it in your browser)

STEP BY STEP

Install your email signature

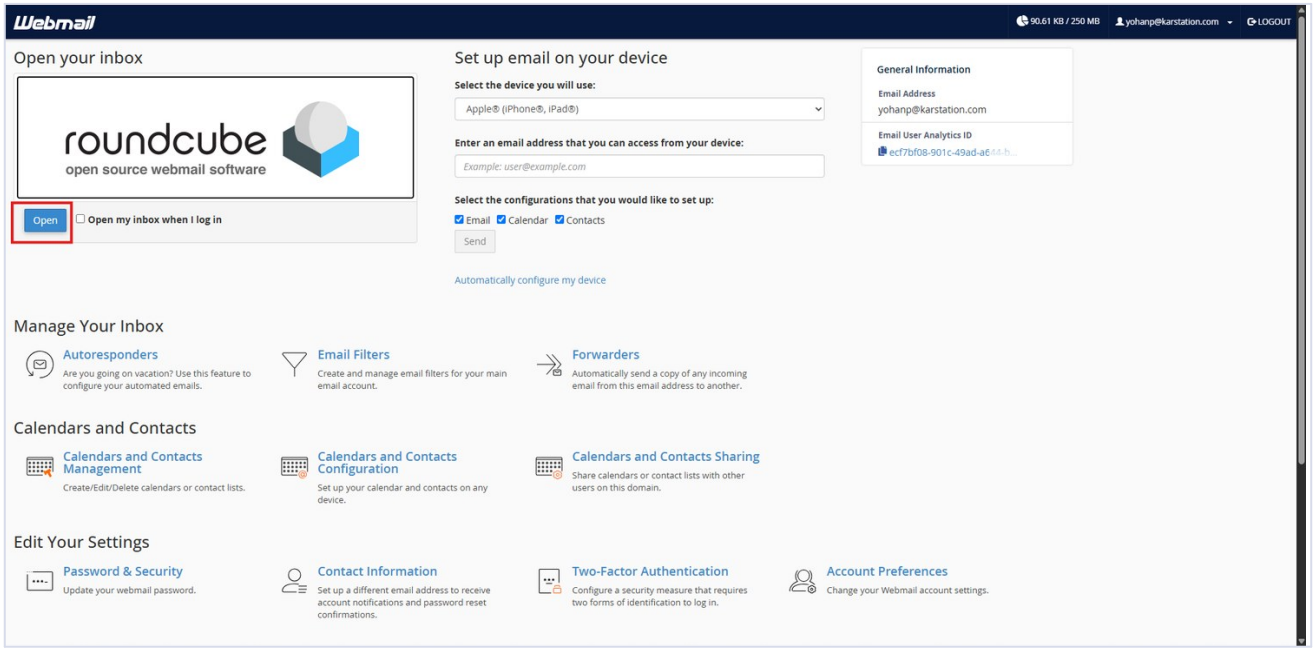

1 Log in to webmail

Open your KARSTATION webmail login page. Enter your **Email Address** and **Password**, then click **Log in**.

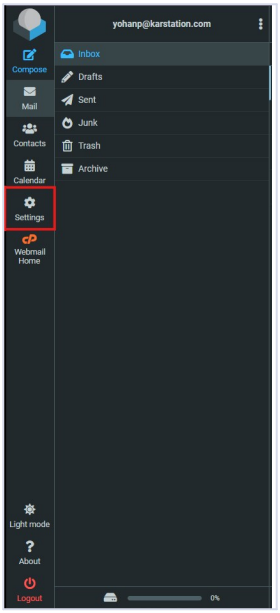

2 Open your inbox

On the Webmail home page, click **Open** under the Roundcube box.

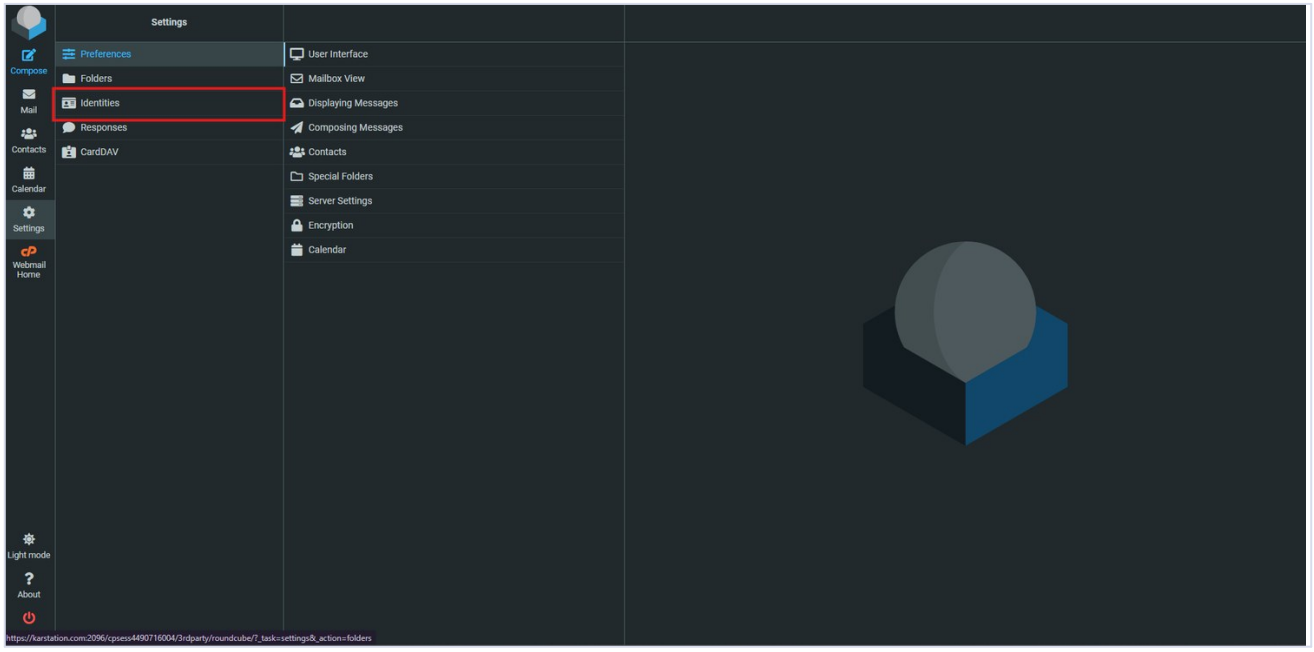

3 Open Settings

In the left-hand menu, click **Settings**.

4 Open Identities

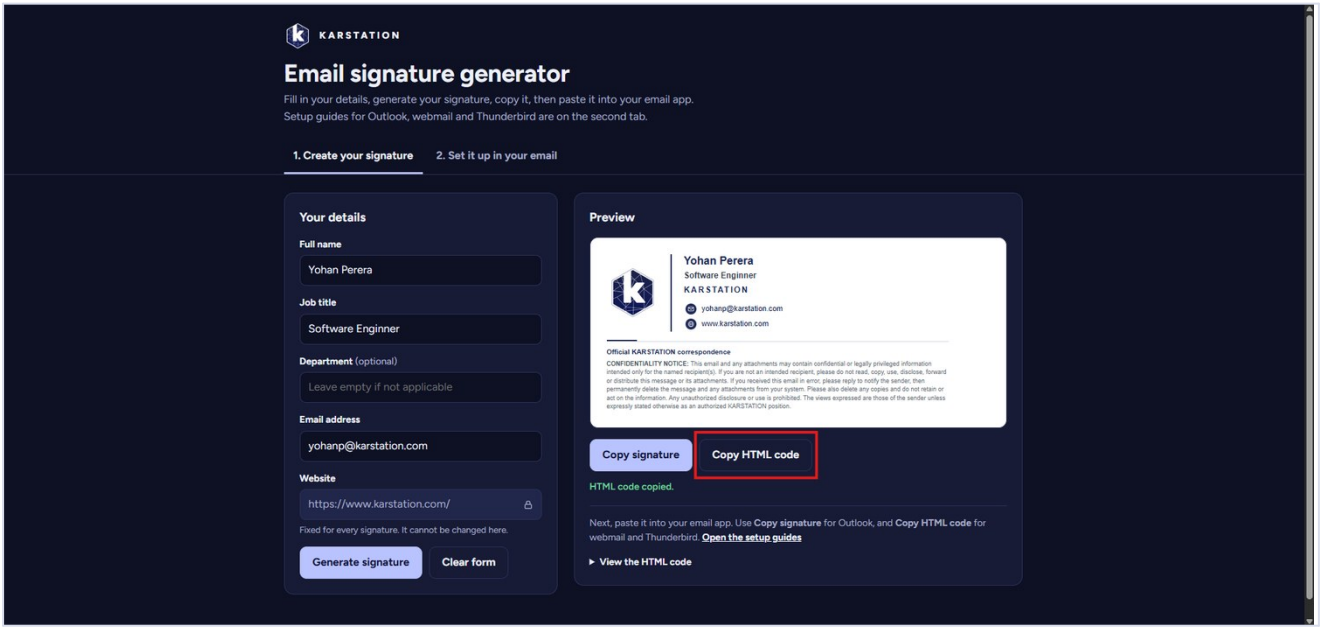

In the Settings list, click **Identities**.

5 Generate and copy the HTML code

Open the KARSTATION Email Signature Generator. Enter your **Full name** and **Job title** (add a **Department** if it applies) and check your **Email address**. Click **Generate signature**, then click **Copy HTML code**.

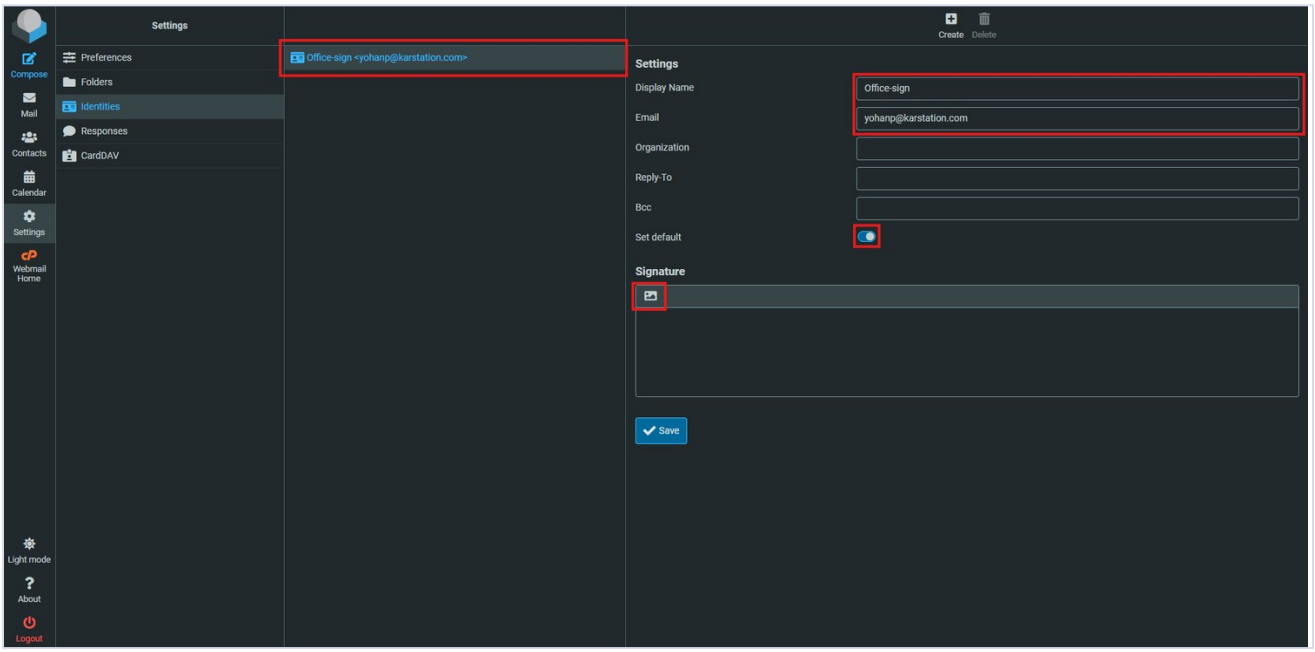

> **Important:** Webmail needs the HTML code, not the plain **Copy signature** button. Check your name and job title for spelling mistakes before you copy.

6 Select your identity

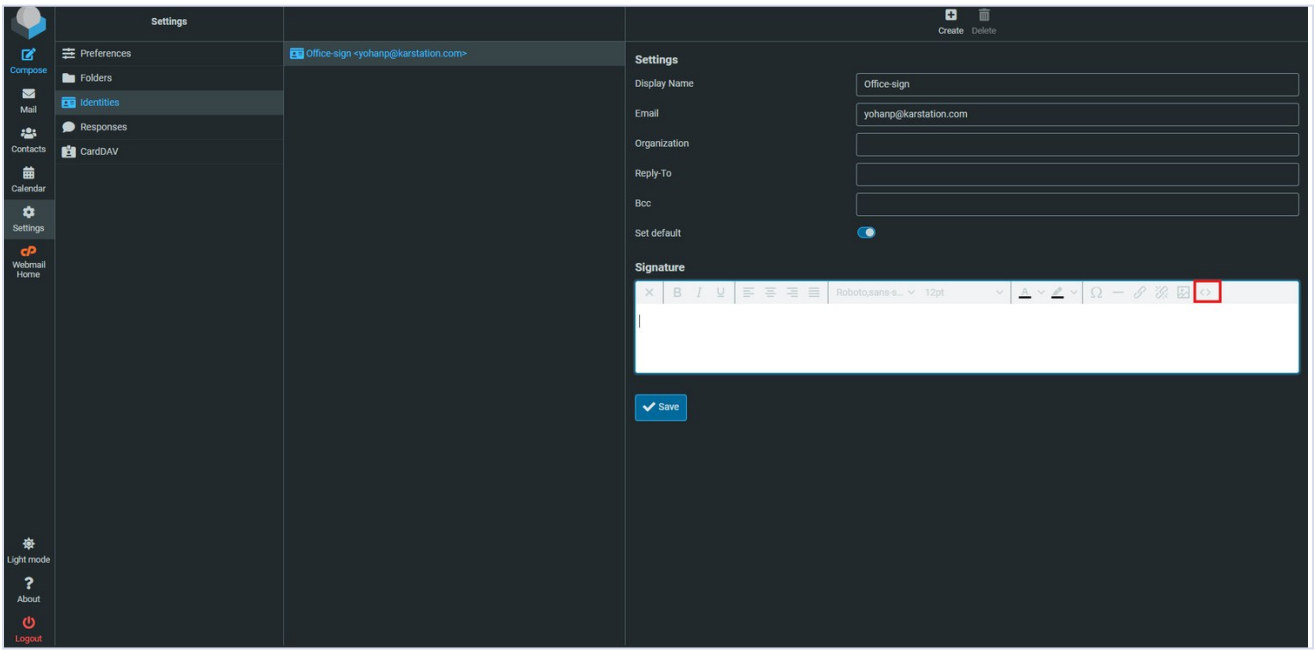

Click your identity in the middle list. Check the **Display Name** and **Email** fields and switch **Set default** on. In the **Signature** box, click the small picture icon at the top left to switch to the HTML editor.

> **Tip:** The Display Name is the name people see when you send them an email, so use your full name. The example screenshot uses a test name.

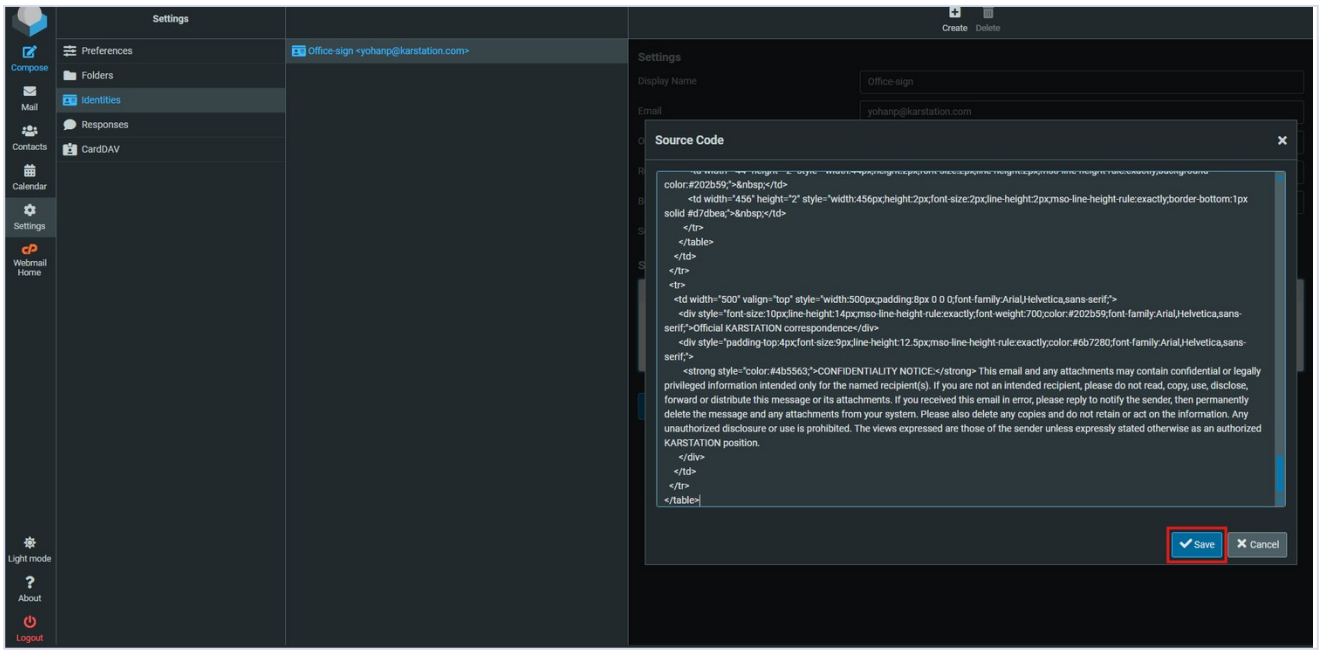

7 Open the source code view

In the editor toolbar, click the **Source code** button, shown as angle brackets (<>) at the far right.

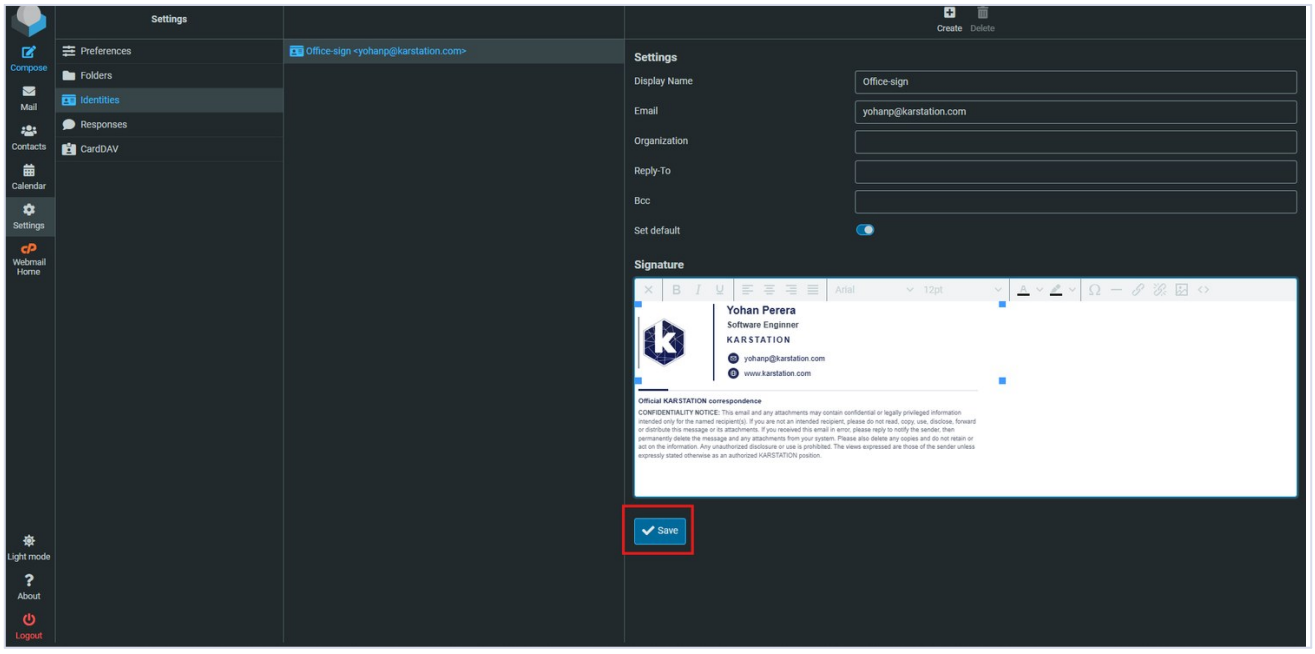

8 Paste the code

In the **Source Code** window, press **Ctrl + V** to paste the HTML code, then click **Save** in that window.

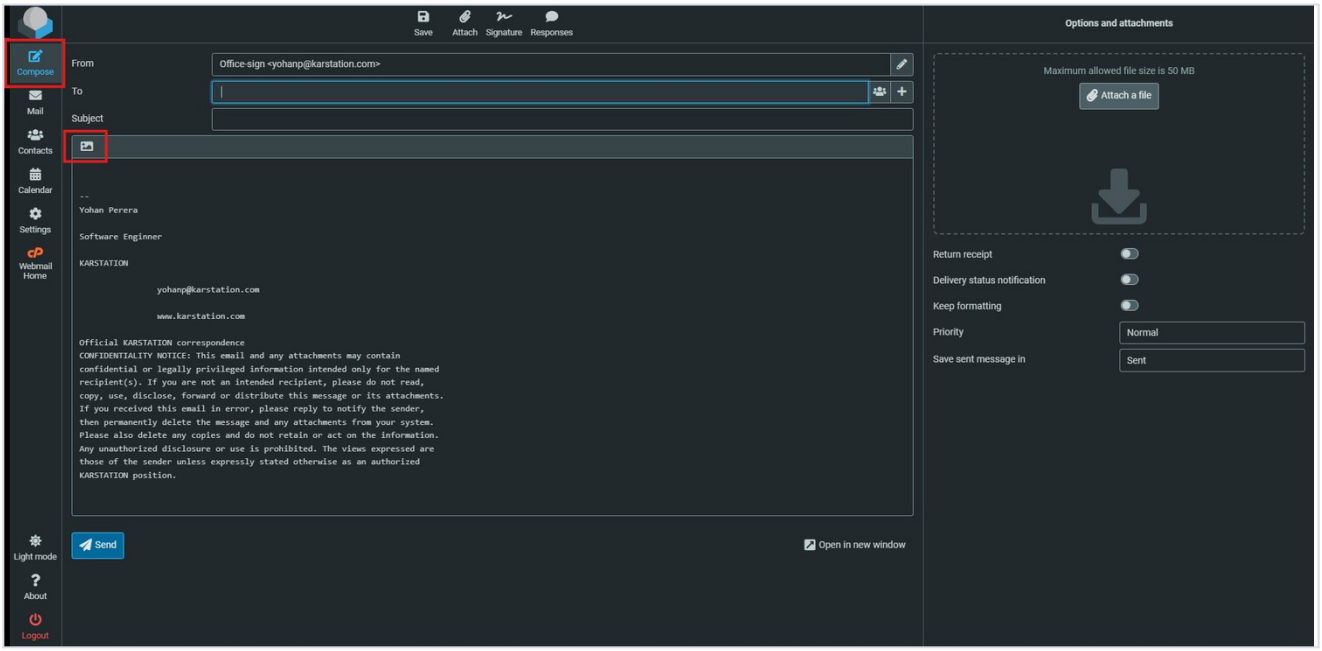

9 Save your identity

Your signature now shows with the KARSTATION logo and contact details. Click the main **Save** button below the signature box.

10 Test with a new message

Click **Compose** to write a new message. The signature may first appear as plain text. Click the picture icon above the message body to switch to the HTML editor.

11 Check the result

The signature now appears fully formatted, below the dashed line. Check that your name, job title, email address and website are correct. You are all set.
